

ICD-10 Code Reference Guide

Q: What is an ICD-10 code?

A: An ICD-10 code is a diagnostic code used to describe a patient's medical condition. ICD-10 code(s) must support medical necessity of the test ordered and be consistent with documentation in the patient's medical record.

Q: What happens if I don't provide an ICD-10 code?

A: An ICD-10 code is required on all test requisitions. Missing information may result in delays in service. Providing ICD-10 codes up-front will avoid unnecessary calls and correspondence to your office.

Q: I order CancerTYPE ID® because the diagnosis is uncertain. How do I decide which ICD-10 code to use?

A: Select the ICD-10 code from the patient's medical record that identified the need for further testing with CancerTYPE ID.

For CancerTYPE ID, we have included a list of covered diagnosis codes from the Palmetto (Medicare) Local Coverage Determination policy. The ICD-10 codes are provided as a guide to help determine if the test is reimbursable by Medicare based on the patient's medical condition.

These diagnosis codes are provided as an aid to determine when a Medicare ABN (Advance Beneficiary Notice) may be necessary for CancerTYPE ID testing. An ABN is given to beneficiaries if Medicare is not likely to provide coverage in a specific case. The notice must be provided prior to performing the service.

Biotheranostics, Inc. does not recommend diagnosis codes and will only submit diagnosis information provided to us by the ordering physician or his/her designated staff.
